**Add-On Services (OPTIONAL) for initial term:**

Name	Description	Price	Unit
Breach and Attack Simulation	Breach and Attack Simulation (BAS) tests an organization's defenses by simulating real-world cyberattacks in a safe, automated environment. BAS mimics tactics like ransomware and phishing to identify vulnerabilities, validate security controls, and provide actionable remediation insights. By replicating modern threats, BAS empowers organizations to strengthen their security posture and reduce risk effectively.	\$ 20,357.14	1
Ransomware Defense Validation	Ransomware Defense Validation is a service designed to test and assess an organization's ability to detect, respond to, and prevent ransomware attacks. It identifies vulnerabilities, evaluates the effectiveness of security controls, and provides actionable recommendations to strengthen defenses, ensuring the organization is prepared to mitigate the risk of ransomware incidents.	\$ 18,728.57	1
